

T6 Pro and Lyric Thermostat Training Flyer

As new products enter our market it is important that we stay aware of what they are. A few products recently added to the system include the T-6 Pro Thermostats and the Lyric Round Thermostat. This flyer is intended to cover some of the features and benefits of both the T-6 Pro's and the Lyric Round thermostat.

If you have not read the [Intro to Thermostats Training Flyer](#) you are encouraged to do so before reading this.

T Series Thermostats:

Honeywell recently consolidated some of their top moving thermostats into a smaller set of SKU's. These SKU's are called the T-Series. Currently we stock the T6 Series but others are available like the T7 Series. The innovative new T6 Programmable Thermostat is easy to install and use, and lets a customer schedule their heating and cooling, by automatically heating or cooling your home to maintain the temperature you like the most.

It has multiple programmable options. It can be changed from day-to-day where each day of the week is a different setting, has a "just at weekend's" settings, or set to keep the same temperature program all week.

- Can be connected to Wi-fi and controlled remotely
- Can be connected to Apple Home Kit or Controlled through Amazon Echo/Alexa.
- Some are Geo-fencing Capable which means it can monitor your phone's location and whenever it senses you are getting close to home it will adjust the settings to the usual "at home" temperature.
- Includes change reminders for filters and low batteries, a real-time clock that automatically adjusts for Daylight Savings Time and has temporary and permanent "Away" settings. (With Geo-Fencing it automatically goes to Away settings when it senses your phone is not home.)

Lyric Thermostat:

The lyric round thermostat was designed for crazy schedules and spur-of-the-moment activities. There are a few main benefits of the lyric round thermostat. These are detailed below:

- A customer can control Lyric from anywhere on a smartphone.
- It is a "learning thermostat" so a customer can let it learn his or her usual patterns in adjusting the temperature and start automatically making the changes. This means it can save customers energy when they are away and get the house warm before heading home.
- It will let the customer know when the filter needs changing.
- It can be connected to Apple Home Kit or Samsung Smart Things home automation platforms.
- It is capable of Geo-Fencing.

This is to complement the [Lyric Leak Detector](#) we stock. Product #: LYRICROUND

Next Steps and a Couple Questions:

The first next step is to learn more. The link below is to our employee resources page on our website. There are other Mincron related training flyers and videos as well as the Mincron Manual available there.
